e-Assurance isn't new. We've been doing it for years. And the shift is easier than you think.

For many businesses, social isolation and lockdown have highlighted significant limitations of traditional physical, on-site assurance activities including: auditing, assessment and inspection tasks. Put simply, when the assurance team are working from home, assurance doesn't happen! It doesn't need to be that way.

Don't jeopardise your current license, accreditation or certification.

For over a decade, Compliance Experts has been providing e-Assurance activities on behalf of large corporates and regulatory agencies. More recently our focus has been firmly placed on enabling our clients to pivot, embrace technology and mobilise their assurance teams through the use of Compliance Checkpoint combined with today's widely used online tools (such as videoconferencing). e-Assurance is now more accessible than ever! And it need not be limited to times of difficult circumstances. The ongoing benefits of e-Assurance activities include reduced time and money spent on travel, greater in-house control, the potential for continuous quality assurance instead of 'lumpy' six- or twelvemonthly audits, better coverage of remote locations, and much more.

The reality is that e-Assurance is here now.

The ISO guidelines for auditing management systems (ISO 19011:2018) now include specifications for e-audits. Our Compliance Checkpoint software suite supports the conduct of e-audits across multiple sites, wherever they are. And our experience can help you with an easy transition towards greater use of e-Assurance with minimal additional overhead.
