# Elevate Compliance with AI-Powered Features

Work smarter, faster  
and more efficiently,  
seamlessly integrated  
with Cloud AI Services.

AI

Smarter

Faster

Seamless

**Compliance Checkpoint** is a fully automated, AI-enhanced compliance management system that delivers real-time visibility, predictive risk insights, and massive productivity gains—making compliance faster, smarter, and strategically valuable.

# The NEW AI-Enhanced Value Proposition

Compliance Checkpoint's new AI-driven features elevate the platform from an automation tool to an intelligent compliance engine that supports auditors, managers, and field teams in real time. These capabilities dramatically increase speed, accuracy, and consistency of compliance workflows.

## AI Document Intelligence

Upload any policy, contract, licence, certificate, or regulatory publication.

### AI automatically:

- Extracts key data (expiry dates, provider details, risk markers).
- Flags issues or missing requirements.
- Pre-fills audit responses with contextual insights.

**Time savings:** up to 90% faster processing, 60-80% error reduction.

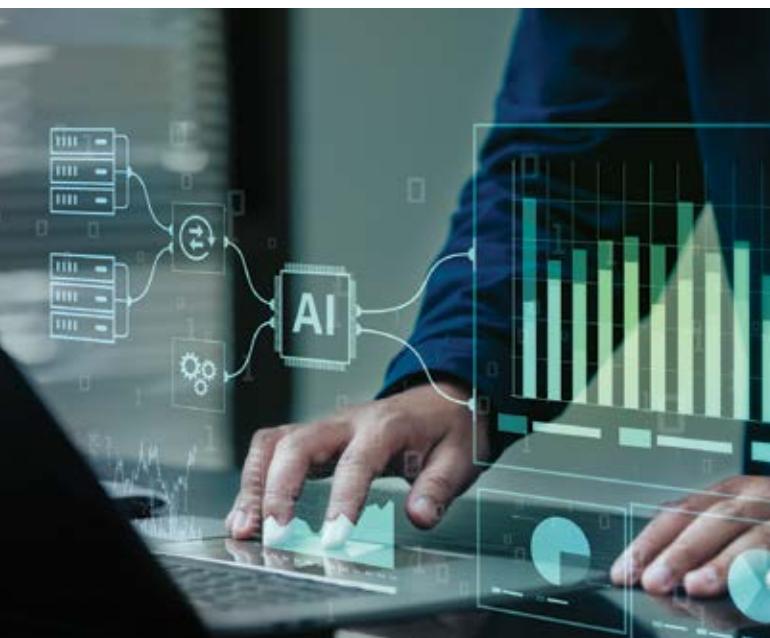

## Voice-to-Insight Recording

Record meetings, site discussions, or walkthroughs.

### AI then:

- Transcribes conversations.
- Identifies compliance actions or risks mentioned.
- Summarises key points and produces structured follow-up actions.

**Outcome:** No manual note-taking; accurate, timestamped audit evidence.

## Instant Image Analysis

Snap photos of equipment, defects, signage, or unsafe conditions.

### AI automatically:

- Recognises objects, text, and compliance-relevant details.
- Generates audit-ready insights instantly.

Perfect for **remote** or **high-risk** environments.

## AI Data Mining & Reporting

AI continuously scans large datasets to detect:

- Trends.
- Anomalies.
- Risk concentrations.
- Recurring issues.
- Predictive early-warning indicators.

Produces decision-ready summaries with timestamps, saving hours of manual analysis and enabling **proactive interventions**.

## Pre-Audit AI Analysis

Before beginning an audit, simply upload documents or recordings.

### AI pre-populates:

- Draft answers to audit questions.
- Identified non-conformances.
- Supporting evidence.
- Relevant historical patterns.

**Outcome:** Auditors start the audit already 50-70% complete, improving accuracy and consistency.

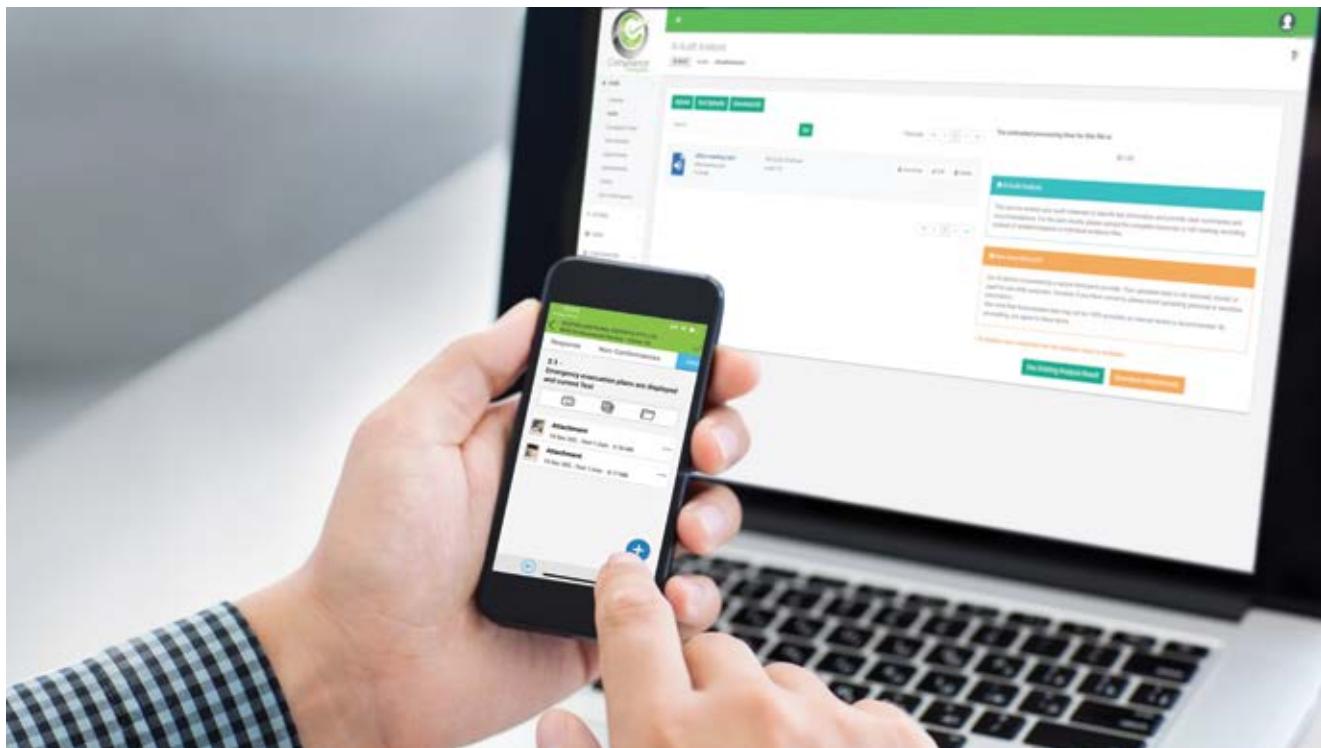

## Customisable AI Models

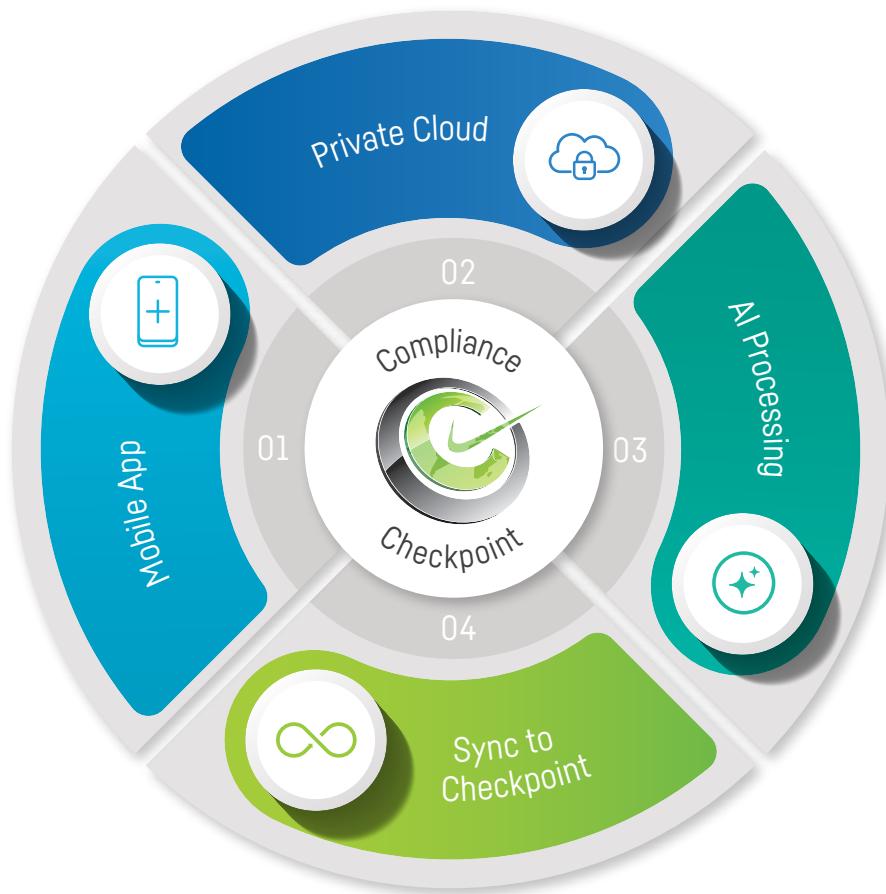

Compliance Experts can tailor the system's AI through:

- Prompt engineering (low cost, high impact).
- Fine-tuning models on specific industry data.

This ensures the AI speaks the language of your **industry, regulations, and workflows**.

# How it works

## SYSTEM WORKFLOW:

Compliance Checkpoint is a prime example of how AI can replace labor intensive manual processes to increase accuracy, efficiency and productivity within an organisation.

### Capture via Mobile App:

- IOS / Android.
- Only data capture is done locally (eg. photos, docs, voice).
- No AI models or data extraction run on the device—key for security and privacy.

### Sync to Private Cloud

- Captured data uploads securely to private cloud storage.
- Avoids filling local mobile storage/data allowance.
- Reduces risk from BYOD or lost devices.

### AI Processing in Cloud

- Heavy AI tasks—document parsing, transcription, summarisation—run securely in the cloud.

### Sync back to Checkpoint

- Results sync back into the Checkpoint dashboard for review and action.

# Privacy & Security Focused

This architecture ensures sensitive compliance data is never stored on personal devices, saving mobile resources and strengthening security. It combines mobility, privacy, and performance in a modern compliance workflow.

## What is the Difference Between Public AI Cloud & Private AI Cloud?

**Public AI Cloud** gives you convenience, but **Private AI Cloud** gives you control.

With a Private AI Cloud, your data stays sovereign, protected, and isolated within your own Private AI Cloud environment (Microsoft, Google, AWS)—never used to train public models or shared externally. You get enterprise-grade security, strict compliance, and consistent accuracy because the AI is tuned to your data, not the open internet.

# Combined Value: What This Means for Organisations

With AI built directly into Compliance Checkpoint, organisations gain:

## Unmatched Efficiency

- Audits prepared automatically.
- Faster reporting, fewer manual tasks.
- Automated audit insight generation (AI recognises, interprets, and analyses voice, image and document evidence).

## Better Risk Prevention

- Predictive analytics.
- Real-time anomaly detection.
- Instant visibility across all sites.

## Consistency & Accuracy

- AI ensures uniform application of compliance standards across teams, contractors, and regions.

## Scalability & Extended Visibility

- Empower contractors, suppliers, and partners to input data directly.
- Manage multi-site, multi-region compliance with enterprise-grade reliability.

## Executive-Level Insight

- Immediate understanding of risk hotspots, control failures, and compliance trends—without manual collation.
